Extreme Pallet System

All Over-Wrap Around-Flip Printing
Side Shifting-Pivoting-Removable

All-Over Wrap Around

This method of All-Over Printing enables you to accomplish AOP qualities never before realized. Your designs can now be fully 3D process quality decorations that are registered from the front to the back of the shirt with as little as 1/8" of gap.

Side Shifting

Do you wish that you had **More STROKE WIDTH** on your machine? With Side Shifting, you print the far left part of the shirt, and then index the pallet over to print the far right side of the shirt. An 18 inch stroke width is now effectively 31 inches. Accomplish a 31" wide image area without the need for a large exposure unit, custom frames, or extended squeegees.

Rotating Pallet

Do you wish that you had **More STROKE LENGTH** on your hardware? By rotating the pallet, you effectively reach where you weren't able to before. Print the top of the shirt and then rotate the floating pallet 180 degrees to print the bottom.

Combines Machinery

If you have 2 machines with the Base pallets, you can produce the front of a shirt on one machine and then move the pallet over to another machine to produce the back. Your 2-12 color automatics become a 24 color system.
